

## **Audio settings in games affect Windows Audio settings**

Keywords / Key Phrases: games audio settings, sound settings

You may wish to check your games audio settings for an option to synchronize with Windows audio. Please disable or uncheck this feature so that changes which you have made to the game does not apply to the audio settings in Windows as well. Only check or enable this option if you are sure that you want to have the same audio settings in Windows and in the games you are playing.
