

## Bass Redirection

bass redirection, bass management, speaker settings, surround mixer

### Summary:

- ✓ Bass Redirection only works with 5.1 speaker systems and above.
- ✓ The Bass Redirection option will allow the subwoofer work with any input audio source.

Creative Speakers are designed to have an active subwoofer that produces a bass sound regardless of the source. 5.1 and above speakers have an additional pole(cable connection) to carry the subwoofer(LFE) channel which 4.1 and below speakers do not have.

For your card, the Software Bass Redirection setting can be found under the following paths:

1. Open the **Mode Switcher** by double-clicking on the icon in the system tray, next to the clock.
2. Switch to **Game Mode**.
3. Click the **Bass** tab.
