

X-Fi SoundCard listed as "Creative SB X-Fi" in Device Manager

Keywords / Key Phrases: xfi, x-fi soundcard install, installation

The downloaded driver supports different sound card models of the same X-Fi series. Thus, the driver install will list the sound card as generic "Creative SB X-Fi" and this listing would indicate a proper installation. If you notice that your sound card is listed differently, it would most likely due to an improper installation or installed using Windows generic driver.
