

Separate Channel Output on our Sound Card

Keywords / Key Phrases: sound card output, separate channel output, separate audio output

You may like to know that the bundled software or applications are developed for general playback and recording. These applications does not support separate channel output on different satellite/monitoring speaker.

Should you require a Sound card and software/application that support separate channel output, you may like to visit our [E-MU](#)(Electronic **M**usic) homepage. E-MU Systems is a leading developer of digital audio products to serve musicians and audio professionals.

Note: E-MU systems are strictly for Music creation only.

Nevertheless, there might be software available from third-party vendors that will let you achieve this.

If you have software that has the feature to output separate audio outputs, please refer to your software vendor directly for assistance on the configuration to allow separate audio output using the existing sound cards.
